Basic Circuit Design Now that you know who the key players in this game are, let's take a look at how we can keep them from ever becoming visible to the naked eye. Essentially, as complicated as things may look on your boat, there are only two circuit designs that typically get employed -- the series circuit and the parallel circuit. Both of these circuit types have the same needs, it's just that their inherent characteristics dictate that the series circuit only be employed when ...

After many decades of troubleshooting and repairing boat wiring issues, I've become pretty darn good at figuring things out. Today's boat wiring is one of the most difficult problems you'll run across due to requirements of the numerous accessories. For the last several weeks, I have been chasing a problem that has been causing me to lose sleep at night.

## Rewiring a boat - overcoming the challenges of electrics ...

For narrowboat AC wiring we would recommend as a minimum the use of 2.5mm square Arctic Blue 3 core multistrand cable (or equivalent) for all connections to shore and also for internal AC wiring. Multi-strand Automotive/Marine Cable. Solid single core cable, such as the standard household type is not allowed for new builds.

Boat wiring uses stranded cables not solid conductors (to prevent vibration damage) however like a house it has a return wire. There are a number of books on the subject such as "The 12-Volt Bible for Boats" which could help. Also remember this is DC not AC and this can have an effect on the contact materials used in switches and breakers.

Wiring an alternator. Just bought an old narrowboat, the only thing being, the electrics were incompletely reconnected following engine overhaul. The electrics are very basic - 2x12 volt batteries, isolating battery switch (breaks positive feeds) can be switched to either battery/both or none. Just a few 12v circuits (horn. lights, water pump, bilge pump and headlight).
