management *Cell Biology Weebly*
?Cells are the basic unit of all forms of life. In this section we explore how structural differences between types of cells enables them to perform specific functions within the organism. These differences in cells are controlled by genes in the nucleus. For an organism

Download File PDF Cell Biology Weebly

to grow, cells must divide by mitosis producing two new identical cells.

Cell Biology

The rough ER is sheets of cell membrane folded into a channels, that is attached to the membrane of the nucleus. Its function is to transport the proteins made by ribosomes, and

Download File PDF Cell Biology Weebly

hormones. The rough ER is covered in ribosomes, allowing for the ribosomes to directly deposit the proteins into the channels of the rough ER.

important organelles in a cell. It is often the largest organelle in animal cells, but this is not always the case. Nuclei contain the genetic material called DNA that is responsible for controlling and directing all cell activities. This is a very important organelle given its vital function.

The Cell Cycle The cell cycle is the series of events in the growth and division of a cell. In the prokaryotic cell cycle, the cell grows, duplicates its DNA, and divides by pinching in the cell membrane. The eukaryotic cell cycle has four stages (the first three of
