Comprehensive in scope and meticulously researched, Handbook of Obesity Prevention analyzes the intricate causes of this public health crisis, and sets out concrete, multilevel strategies for meeting it head-on. This innovative handbook clearly defines obesity in clinical, epidemiologic, and financial terms, and offers guidelines for planning and implementing programs and evaluating results. This systematic approach to large-scale social and policy change gives all parties involved—from individual practitioners to multinational corporations—the tools to set and attain realistic goals based on solid evidence and best practice in public health. A sample of topics covered: The individual: risk factors and prevention across the lifespan, specific populations (pregnant women, ethnic and regional groups). Levers for change in schools and workplaces. Community settings: role of the physical environment. "De-marketing" obesity: food industries and the media. Grassroots action: consumers and communities. The global obesity epidemic: rapid developments, potential solutions. From obesity prevention to health promotion: the future of the field. Its level of detail and wide range of topics make the Handbook of Obesity Prevention a bedrock sourcebook, overview, reference, or teaching text. Read by topic or cover to cover, here is accurate, up-to-date information for professionals and students in all areas of public health.

This volume of the IARC Monographs provides an assessment of the carcinogenicity of fluoro-edenite fibrous amphibole, silicon carbide fibres and whiskers, and carbon nanotubes, including single-walled and multiwalled types. None of these agents had been assessed previously by the IARC Monographs Working Group. The Working Group relied mainly on epidemiological studies to evaluate the carcinogenic hazard to humans exposed to fluoro-edenite fibrous amphibole, an environmental contaminant that was reported to cause mesothelioma in the regional population of Biancavilla, Sicily, Italy. Silicon carbide fibres are by-products of the manufacture of silicon carbide particles by the Acheson process; silicon carbide whiskers are produced by other processes. The evaluations of the fibres and of the occupational exposures associated with the Acheson process were mainly based on epidemiological studies, whereas the assessment of the whiskers—in the absence of epidemiological —was based on carcinogenicity bioassays and consideration of their physical properties. In view of the absence of epidemiological studies on carbon nanotubes and the limited information available from mechanistic data, the evaluations of single-walled and multiwalled carbon nanotubes relied essentially on carcinogenicity bioassays.

who deals with cancer patients posttransplant." --Book Jacket.

Integrates the various disciplines of the science of health disparities in one comprehensive volume The Science of Health Disparities Research is an indispensable source of up-to-date information on clinical and translational health disparities science. Building upon the advances in health disparities research over the past decade, this authoritative volume informs policies and practices addressing the diseases, disorders, and gaps in health outcomes that are more prevalent in minority populations and socially disadvantaged communities. Contributions by recognized scholars and leaders in the field featuring contemporary research, conceptual models, and a broad range of scientific perspectives;provide an interdisciplinary approach to reducing inequalities in population health, encouraging community engagement in the research process, and promoting social justice. In-depth chapters help readers better understand the specifics of minority health and health disparities while demonstrating the importance of advancing theory, refining measurement, improving investigative methods, and diversifying scientific research. In 26 chapters, the book examines topics including the etiology of health disparities research, the determinants of population health, research ethics, and research in African American, Asians, Latino, American Indian, and other vulnerable populations. Providing a unified framework on the principles and applications of the science of health disparities research, this important volume: Defines the field of health disparities science and suggests new directions in scholarship and research Explains basic definitions, principles, and concepts for identifying, understanding and addressing health disparities Provides guidance on both conducting health disparities research and translating the results Examines how social, historical and contemporary injustices may influence the health of racial and ethnic minorities Illustrates the increasing national and global importance of addressing health disparities Discusses population health training, capacity-building, and the transdisciplinary tools needed to advance health equity A significant contribution to the field, The Science of Health Disparities Research is an essential resource for students and basic and clinical researchers in genetics, population genetics, and public health, health care policymakers, and epidemiologists, medical students, and clinicians, particularly those working with minority, vulnerable, or underserved populations.

AN ESSENTIAL NEW RESOURCE ON A FUNDAMENTAL DETERMINANT OF HEALTH Sleep, along with the sleep-related behaviors that impact sleep quality, have emerged as significant determinants of health and well-being across populations. An emerging body of research has confirmed that sleep is strongly socially patterned, following trends along lines of socioeconomic status, race, immigration status, age, work, and geography. The Social Epidemiology of Sleep serves as both an introduction to sleep epidemiology and a synthesis of the most important and exciting research to date, including: - An introduction to sleep epidemiology, including methods of assessment and their validity, the descriptive epidemiology of sleep patterns and disorders, associations with health, and basic biology - What we know about the variation of sleep patterns and disorders across populations, including consideration of sleep across the lifespan and within special populations - Major social determinants of sleep (including socioeconomic status, immigration status, neighborhood contexts, and others) based on the accumulated research With editors from both population science and medicine, combined with contributions from psychology, sociology, demography, geography, social epidemiology, and medicine, this text codifies a new field at the intersection of how we sleep and the social and behavioral factors that influence it.

Traditionally, impulsive and compulsive behaviors have been categorized as fundamentally distinct. However, patients often exhibit both of these behaviors. This common comorbidity has sparked renewed interest in the factors contributing to the disorders in which these behaviors are prominent. Impulsivity and Compulsivity applies a provocative spectrum model to this psychopathology. The spectrum model is consistent with a dimensional model for psychopathology and considers the dynamic interaction of biopsychosocial forces in the development of impulsive and compulsive disorders. In this important work on impulsive/compulsive psychopathology, leading researchers and clinicians share their expertise on the phenomenological, biological, psychodynamic, and treatment aspects of these disorders. Differential diagnosis, comorbidity of the impulsive-compulsive spectrum of disorders, and assessment by the seven-factor model of temperament and character are discussed. Chapters are also dedicated to the anti-anxiety function of impulsivity and compulsivity, defense mechanisms in impulsive disorders versus obsessive-compulsive disorders, and the unique aspects of psychotherapy with impulsive and compulsive patients. Clinical researchers and clinicians will be enlightened by this exceptional work. The information provided is supplemented with clinical vignettes, and the final chapter provides a synthetic summary that offers a unified, dynamic approach to impulsive and compulsive behavior.

In Fragile X-Associated Tremor Ataxia Syndrome (FXTAS), the editors present information on all aspects of FXTAS, including clinical features and current supportive management, radiological, psychological, and pathological findings, genotype-phenotype relationships, animal models and basic molecular mechanisms. Genetic counseling issues are also discussed. The book should serve as a resource for professionals in all fields regarding diagnosis, management, and counseling of patients with FXTAS and their families, as well as presenting the molecular basis for disease that may lead to the identification of new markers to predict disease risk and eventually lead to target treatments.

This volume of the IARC Monographs presents evaluations of the carcinogenic hazard to humans of drinking coffee and very hot beverages including, but not limited to, mate. An IARC Monographs Working Group reviewed epidemiological evidence, animal bioassays and co-carcinogenicity studies, and mechanistic and other relevant data to reach conclusions as to the carcinogenic hazard to humans of drinking coffee, mate, and very hot beverages. The Working Group assessed more than 1000 observational and experimental studies that investigated the association between cancer at more than 20 sites with drinking coffee, mate, and very hot beverages.
