A rich and insightful collection of personal essays about life, death and our connection to the environment from bestselling Australian author Sophie Cunningham

Offers an illustrated look at the trees of New York City, presenting color photographs of individual specimens and narrative explorations of their places in the character and history of the city.

Trees in the City provides an introduction to the process of humanizing the cityscape and guide to planting trees in city conditions. This book focuses on four basic concepts. First, trees play an essential role in human's urban life. Second, people must become aware of the environmental, esthetic, social, and political importance of trees. Third, trees need to be integrated with the pattern and function of urban activity. Finally, the design, placement, and maintenance of trees on city streets are the responsibility of everyone in the community. The topics discussed include a short history of trees in the city; environmental and esthetic relation of trees, human, and the city; tree choices and features; and designing a city street—models, problems, and matrixes. This publication is beneficial to landscape architects and individuals interested in tree planting in urban areas.

Complemented by more than seven hundred full-color photographs, drawings, and maps, this intriguing field guide takes a close-up look at the trees of New York City and the metropolitan area, discussing the natural history of each tree, furnishing identification tips, and including a dictionary of the oldest, strangest, and most beautiful trees. Original. (Biology & Natural History)

For those who have ever wondered why we have trees in cities or what makes the layout of cities like Paris and Amsterdam seem so memorable, City Trees: A Historical Geography from the Renaissance through the Nineteenth Century by Henry W. Lawrence provides a comprehensive and handsome guide to the history of trees in urban landscapes. Covering four centuries of development in the cities of Europe and America, this book shows how trees became integral to urban landscapes by looking at the historical evolution of the spaces in which they were planted and how these spaces were used. Reflecting on the impact trees have had on what many consider to be the fundamental aspects of city life—people, buildings, social and economic activity—Lawrence draws on graphic materials, written descriptions, local histories, and archival research to provide a unique look at the tree's role in urban landscape history. Primarily concerned with aesthetics, power, and national traditions, Lawrence reflects on the differing impacts city trees have had on multiple aspects of culture, from their roles as symbols and their representation of economic prosperity to the differing ways nations planted their trees, which gradually blended into an international style of urban planting. Complete with fascinating illustrations, City Trees will appeal to those interested in urban history and geography as well as the general public interested in cities, cultural history, and landscape design.

Intimate in size yet quietly breathtaking in scope, this graceful gift book will forever change how you think, and how you feel, about trees. In poetically sparse scientific observations, renowned conservation biologist Gretchen Daily narrates the evolution, impact, and natural wonder of trees. Alongside photographs by Chuck Katz, the text and images form a quiet and moving meditation on The Power of Trees. Twenty-six duotone black and white photographs illustrate the development of trees: how trunks were formed, what tree rings tell us about human societies, and how trees define the future of humanity.

Pictures of trees threading through the landscape - dotting mountainsides, braiding along the sides of glassine rivers - bear witness to the lyrical force and clarity of Daily's observations. Recreating the authors' hike together through the landscape of the Skagit River in Washington State, the balletic movement between Daily ' s commentary and Katz ' s vision reaches out to readers, inviting them to enjoy the landscape through a scientific understanding of trees. At once emotional and intellectual, The Power of Trees is the first collection of nature photographs that invites the reader to not only delight in the gorgeous play between light and shadow, but also the fascinating natural mechanisms that create such striking natural beauty. An ecologist by training, Gretchen Daily is an internationally acclaimed conservancy advocate and scholar. Her role as a National Trustee for The Nature Conservancy will feature prominently in the national marketing campaign to bridge the gap between scientific educators and the general nature reader.
