that it does not depend on a third-party solution. Service oriented architecture is an integration paradigm that is based on a fundamental design principle and provides architectural interoperable services - hence its name. It encompasses legacy systems, software components and message processing capabilities.

Key Differences between ESB, EAI and SOA
Enterprise Application Integration (EAI) EAI combines computer systems and software to make data integration for a single organization's applications. It achieves this

Difference ...

Asynchronous messaging architectures have proven to be the best strategy for enterprise integration because they allow for a loosely coupled solution that overcomes the limitations of remote communication, such as latency and unreliability. That's why most EAI suites and ESB's are based on asynchronous messaging.

Home - Enterprise Integration Patterns
EAI vs. SOA vs. ESB. Enterprise application integration has a lot in common with a service-oriented architecture (SOA) and an
