Environmental Awareness | Educate Yourself and Those ...

Environmental awareness is very easy to understand. Essentially, it is being aware of the issues that our earth is currently dealing with. Issues like deforestation, pollution, our ozone layer, water waste, landfills, and so much more. All of these issues are the direct result of human actions on the environment.

The Importance of Environmental Awareness and How You Can Help

The environment refers to all parts of nature, living and non-living. Being aware of the environment is particularly important, given the increasing environmental challenges we are facing, such as: climate change; global warming; water scarcity; droughts; deforestation; floods; pollution. Being aware of these issues and making beneficial lifestyle changes to alleviate negative effects on the environment, is what environmental awareness is about.

Survey of 600 secondary and senior secondary school students in the city centre and villages of Patiala district found that rural students and students studying in government schools were still not aware of the various threats of environment and natural calamities and most of the ...

Environmental Education will enable every child to grow up in a healthy home, school and community. In fact, the future development of our children, and of course, their world depends on their enjoying good health. For this to take place, however, the Environmental Education teachers need to be properly equipped with not only updated knowledge on environment but also effective strategies of teaching to drive home the message of environmental protection and conservation among the students. Thus the author investigated scientifically the nature of environmental awareness, attitude and knowledge among the secondary school students.

The key to successful Environmental Education is the classroom teacher. The effectiveness of Environmental Education relies heavily on the knowledge, skills and attitudes of the educator. It is essential, the teacher should himself be fully aware of Environmental problems and day to day activities related to the environment. Education and awareness among the teachers are the most effective forces that can save our besieged environment. Since, Environment protection and conservation is very important for the promotion of sustainable development, the role of the teacher in facilitating the environmental awareness among the students, research and pre-service and in-service training of the teachers assumes considerable significance which has its relevance in this context today. Today, there is an urgent need of generating awareness about environment and the related issues and problems of the environment among all the sections of the society. The present book is an humble attempt to measure the awareness of environment among school teachers and especially among secondary school teachers.

The environmental movement of the 1960s made educationists in some parts of the world aware of the significance and importance of ecology in curricula at all levels of education, from kindergarten to post-secondary. A great deal of progress was made in the early 1970s in incorporating environmental awareness programs into educational systems so that what was once considered a fad was gradually becoming a part of formal education in a number of institutions, especially in Canada and the U.S.A. It was therefore appropriate that an international scientific body devote some time to the issue of ecology in education. Early in 1976, I suggested to the International Association for Ecology (Inteco1) that a symposium on Environmental Education be included in the program of the Second International Congress of Ecology scheduled to be held in Jerusalem in September 1978. In the first draft program of the Congress, the topic was included as a poster session. I considered this inadequate and appealed to the Congress Steering Committee to focus greater attention on environmental education. The first draft program contained phrases like "utilization of resources", "conservation problems", "environmental monitoring", and "irreversible changes". These phrases more or less assumed that people in general understood ecological principles. Literature on environmental education seems to suggest that a wide gap separated most of the professional ecologists from a large portion of mankind primarily because we the ecologists have paid scant attention to the ecological education of world's citizens.

This book presents an international perspective on environmental educational and specifically the influence that context has on this aspect of curriculum. The focus is on environmental education both formal and non formal and the factors that impact upon its effectiveness, particularly in non-Western and non-English-speaking contexts (i.e., outside the UK, USA, Australia, NZ, etc.).

First Published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

Research Paper (postgraduate) from the year 2013 in the subject Pedagogy - School Pedagogics, Allahabad University, language: English, abstract: Environmental education should have been given high priority. It extends to create awareness about the environment among the students. This study uses the descriptive type survey approach. The sample for the study consisted of 152 students (30 boys & 39 girls of class IX and 35 boys & 48 girls of class XI respectively) studying in Hindi medium U P Board schools of Allahabad city. The tools used were Environmental Awareness Test and Scientific Attitude questionnaire of K. S. Misra. Product- moment coefficient of correlation was computed for the analysis of the data. The environmental education conference at Tbilisi (USSR) in 1977 identified its ultimate aim as creating awareness, behavioural, attitudes and values directed towards preserving the biosphere, the quality of life everywhere as well on safeguarding ethical values and cultural and natural heritage, including holy places, historical landmarks, works of arts, monuments and sites, human and natural environment, including fauna and flora and human settlements. The Intergovernmental Conference on Environmental Education (UNESCO, 1978) recommended the primary categories of the environmental education curriculum goals and objectives of (a) awareness, (b) knowledge, (c) attitudes, (d) skills, (e) participation.

Based on this Book people should understand the environmental awareness among secondary school teachers in chittoor district. And also able to know the teachers attitude about environmental awareness. In this many tools were used to collect information regarding environment awareness. On the light of the study we can conclude that the locality and gender didn't make much difference in Environmental Awareness. Where as the science and Maths students are slightly more aware than language and History teachers. Especially we should create more Awareness among the history optional teachers. Finally I submit that it is no more unrealistic than those who think that the current model of technology development can sustain us for ever. We are collapsing and taking the earth down with us. We have no option but think boldly of different ideas if we want to survive in this world, then without any hesitation, we need to protect the environment. This book can give an idea of further research regarding environment awareness for the freshers in the field of research.
