ISO Guide 35:2006 gives statistical principles to assist in the
understanding and development of valid methods to assign
values to properties of a reference material, including the
evaluation of their associated uncertainty, and establish their
metrological traceability. Reference materials (RMs) that
undergo all steps described in ISO Guide 35:2006 are usually
accompanied by a certificate and called a certified reference
material (CRM).

The preparation of RMs for calibration is also part of the scope of ISO Guides 34 and 35. The treatment in this Guide is limited to the fundamentals of small-scale preparation of RMs and the value assignment, as used by laboratories to calibrate their equipment. Larger scale production of such RMs, with the possible aim of distribution is beyond the scope of this Guide. This type of activity is covered in ISO Guides 34 and 35.

The general requirements laid out in ISO 17034 include a characterisation strategy. As characterisation approaches are important for reference materials production, scientists from the JRC and the National Metrology Institute of South Africa provided a more easy to read summary to the new ISO Guide 35 chapter on characterisation.
