5. Prove that the following Lebesgue integrals exist: $\int_0^1 (x \log x)^2 dx$, $\int_0^1 \log x \log(1-x)^2 dx$, $\int_0^1 \frac{1}{1-x} \log x dx$.
Solution: The function $(x \log x)^2$ is continuous, hence measurable, and bounded between 0 and e^{-2} on $(0,1)$. Thus it is Lebesgue integrable on $[0,1]$

Problems with Solutions

In mathematics, the integral of a non-negative function of a single variable can be regarded, in the simplest case, as the area between the graph of that function and the x-axis. The Lebesgue integral extends the integral to a larger class of functions. It also extends the domains on which these functions can be defined. Long before the 20th

Lebesgue measure and integration 1st Edition solutions manual
Elementary Introduction to the Lebesgue Integral is not just an excellent primer of the Lebesgue integral for undergraduate students but a valuable tool for tomorrow's mathematicians. Since the early twentieth century, the Lebesgue integral has been a mainstay of mathematical analysis because of its important properties with respect to limits. For this reason, it is vital that mathematical ...
