Mark Dombeck, Ph.D. image by Robert  
Murphy(lic) From the moment we are first  
conceived, to the day we die, we are  
constantly changing and developing.  
While some of the changes we undergo are  
as a result of chance incidents and  
personal choices, the vast majority of life  
changes and stages we pass through are  
due to our common biological and  
psychological heritage as human beings  
and are shared by all people.

## Psychology

Developmental psychology is the branch of psychology that focuses on how people grow and change over the course of a lifetime. Those who specialize in this field are not just concerned with the physical changes that occur as people grow; they also look at the social, emotional, and cognitive development that occurs throughout life.

## ~~Understanding Stages in Developmental Psychology~~

According to psychosocial theory, we experience eight stages of development over our lifespan, from infancy through late adulthood. At each stage there is a conflict, or task, that we need to resolve. Successful completion of each developmental task results in a sense of competence and a healthy personality.

The process of human growth and development is more obvious in infancy and childhood, yet your development is happening this moment and will continue, minute by minute, for the rest of your life. Who you are today and who you will be in the future depends on a blend of genetics, environment, culture, relationships, and more, as you continue through each phase of life.
