A fire pump is a part of a fire sprinkler system’s water supply and powered by electric, diesel or steam. The pump intake is either connected to the public underground water supply piping, or a static water source (e.g., tank, reservoir, lake). The pump provides water flow at a higher pressure to the sprinkler system risers and hose standpipes. A fire pump is tested and listed for its use ...

Fire pump - Wikipedia

ⓘ Horizontal elbows or tees upstream of a fire pump must be 10 pipe diameters from the suction flange on a split-case fire pump. ⓘ Pumps must maintain a positive suction pressure at the suction flange. ⓘ Electrical feeds to fire pump controllers must have a two-hour fire rating. ⓘ Fire pumps can’t be used as pressure-maintenance pumps.

Fire Pump Sizing and Selection - PHCP Pros

Fire Pump Room Equipment. A fire pump is a part of a fire sprinkler, internal and external Hydrant system’s water supply and can be powered by electric, diesel pump. The pump intake is connected to the independent fire sump. The pump provides water flow at a higher pressure to the sprinkler system, risers and hose standpipes. A fire pump is tested and listed for its use specifically for fire service by a third-party testing and listing agency, such as UL or FM Global.
