Named one of the "100 Best Books of the 20th Century" by Logos Magazine (UK). Will be on display at the Frankfurt Book Fair 1999.

Philosophers have mused over them, poets have written about them and musicians have sung about them. Love, desire and passion will at some point touch everyone's life - yet they are little understood and some of the oldest mysteries of mankind. Why do people fall in love and what is love anyway? What makes people attractive? How do these emotions tie in with our physiology and how we have evolved? Lust and Love: Is it more than Chemistry? provides answers to some of these questions through the eyes of science. It takes a light hearted and entertaining approach in explaining the current scientific knowledge of why people are attracted to each other, from the first moments of meeting to how emotions change in a long lasting partnership. The book covers research from the fields of chemistry, biochemistry, neurology, psychiatry, psychology, physics and medicine while using the love story of a fictional couple to take the reader on a journey explaining the science. Additional topics on the 'tools of attraction', including the history of the lipstick, and the development of perfumes and aphrodisiacs, provide an absorbing insight into the subject. Medical treatments and conditions including contraception, erectile dysfunction and the climacteric phenomenon are also discussed. This engaging and unusual book is ideal for anyone interested in the science behind love, desire and passion.

The village of Abiqui, New Mexico, is easily missed by the casual traveler who might think that Abiqui consists of only the post office and a few stores along Highway 84, about 46 miles northwest of Santa Fe. If one were to go up the road, pass the post office, onto the above mesa, one would be stepping back into an era of early Spanish and Native American history. Abiqui is established on the site of an old abandoned Indian Pueblo. In the mid-18th century it became a settlement of Spaniards and Genzaros. (A Genzaro claims ancestry of both the Colonial Spanish settlers and Native American Indian tribes of the area.) Like many northern New Mexico villages, Abiqui has attracted various artists who come to this part of the world to capture the beauty of the landscape One such artist was Georgia O'Keeffe, who first came to this area in early 1930s. She bought a home in the village of Abiqui in the mid-1940s and lived there for over 40 years. Many journalists and authors have come to the village, interviewed some of the locals and then returned to their big city desks and written about the quaint village life, its inhabitants and its famous world-renowned artist. However, there has never been a book written from the perspective of a native from the village. Not only is Napolen Garcia a native of Abiqui, he knew and worked for Georgia O'Keeffe over the 40 years that she made Abiqui her home, living around the corner from his home on the plaza in the pueblo. Napolen has been interviewed by many of the big city journalists; but has always felt that the resulting work never truly told the story of his village and what it was like having such a famous resident as a fellow villager. With thehelp of his friend, Analinda, he now has that opportunity to tell his own story.

A favourite dodge to get your story read by the public is to assert that it is true, and then add that Truth is stranger than Fiction. I do not know if the yarn I am anxious for you to read is true; but the Spanish purser of the fruit steamer El Carrero swore to me by the shrine of Santa Guadalupe that he had the facts from the U. S. vice-consul at La Paz--a person who could not possibly have been cognizant of half of them.As for the adage quoted above, I take pleasure in puncturing it by affirming that I read in a purely fictional story the other day the line: "Be it so," said the policeman." Nothing so strange has yet cropped out in Truth.

"Don't miss this." -TEEN PEOPLE Mara Valentine is in control. She's a straight-A senior, a vegan, and her parents' pride and joy. She's neck-and-neck with her womanizing ex-boyfriend for number-one class ranking and plans to kick his salutatorian butt on her way out the door to Yale. Mara has her remaining months in Brockport all planned out, but the plan does not include having V, her slutty, pot-smoking, sixteen-year-old niece - yes, niece - come to live with her family. Nor does it involve lusting after her boss or dreaming about grilled cheese sandwiches every night. What does a control freak like Mara do when things start spinning wildly out of control? With insight, authenticity, and a healthy dose of humor, Carolyn Mackler creates an evolving Type A heroine that every reader will recognize - and root for.

A Publishers Weekly Best Book One of the New York Public Library's "25 Books to Remember" for 1999 Homosexuality in its myriad forms has been scientifically documented in more than 450 species of mammals, birds, reptiles, insects, and other animals worldwide. Biological Exuberance is the first comprehensive account of the subject, bringing together accurate, accessible, and nonsensationalized information. Drawing upon a rich body of zoological research spanning more than two centuries, Bruce Bagemihl shows that animals engage in all types of nonreproductive sexual behavior. Sexual and gender expression in the animal world displays exuberant variety, including same-sex courtship, pair-bonding, sex, and co-parenting-even instances of lifelong homosexual bonding in species that do not have lifelong heterosexual bonding. Part 1, "A Polysexual, Polygendered World," begins with a survey of homosexuality, transgender, and nonreproductive heterosexuality in animals and then delves into the broader implications of these findings, including a valuable perspective on human diversity. Bagemihl also examines the hidden assumptions behind the way biologists look at natural systems and suggests a fresh perspective based on the synthesis of contemporary scientific insights with traditional knowledge from indigenous cultures. Part 2, "A Wondrous Bestiary," profiles more than 190 species in which scientific observers have noted homosexual or transgender behavior. Each profile is a verbal and visual "snapshot" of one or more closely related bird or mammal species, containing all the documentation required to support the author's often controversial conclusions. Lavishly illustrated and meticulously researched, filled with fascinating facts and astonishing descriptions of animal behavior, Biological Exuberance is a landmark book that will change forever how we look at nature.

This text traces the history of contraception and abortifacients from ancient Egypt to the 17th century, and discusses the scientific merit of the ancient remedies and why this knowledge about fertility control was gradually lost over the course of the Middle Ages.
