Surveys the ways in which man has symbolized his search for order in his environment through architecture in such cultures as ancient Egypt and modern America

Attempts to develop a theory of understanding architecture in concrete, existential terms, following the guidelines of Heidegger

The chief focus of the book is on the symbolic and linguistic. The purpose is to develop an integrated theory of architectural description and architectural intention (and this includes the intention of the user as well as that of the designer), insofar as architecture is an art. Norberg-Schulz is a practicing architect; his buildings stand in several countries; and he elucidates the nature of architectural reality with a practiced eye and from a practical viewpoint. Although the methods and theory that his book develops are uncompromisingly rigorous and tightly formed, they are everywhere related to actual building, through specific examples and through the use of over 100 photographs. The structure that Norberg-Schulz has fashioned is surely one of the most impressive intellectual edifices that any architect has ever produced. The materials that are organically worked into it include Gestalt psychology, the mechanics of perception, information theory, modern analytic philosophy, and in particular, linguistic analysis, and the general theory of signs and symbols. The result, however, is not an eclectic hodge-podge; all these materials have their place and purpose; none is applied extraneously for "show" or purely decorative effect. And all this divergent material had to be joined according to plan within formal bounds in order to produce a theory with equally divergent applications: one that can treat not only of the aesthetics of architecture but equally well of its social, psychological, and cultural effects. The chief focus of the book is on the symbolic and linguistic. The purpose is to develop an integrated theory of architectural description and architectural intention (and this includes the intention of the user as well as that of the designer), insofar as architecture is an art.

Examines the inherent meaning and language of architecture, and analyzes the representative works of Baroque, modern, and post-modern architecture

Translated by Thomas McQuillan Architecture is a manifestation of the environment in which it is placed, observes distinguished architect and theoretician Christian Norberg-Schulz. A simple enough observation, but one that becomes subtle and nuanced in this landmark book which attempts to define, for the first time, what Nordic building really is. Norberg-Schulz begins by contrasting the natural world of the North with that of the Mediterranean, the Nordic unendingness against the sun-saturated and homogeneous South. Using themes such as "natural," "domestic," "universal," and "foreign," he finds the architecture of both regions sensibly related to their environments; but whereas the South lends itself to abstraction, the North is marked by variation, openness, and dynamism—by low light, forests, and space. Exploring the ways built experience "takes place," Norberg-Schulz charts the distinctive character of land and climate that distinguishes Denmark's, Sweden's, Finland's, and Norway's architectural traditions from each other and from those to the South. While each of these countries might be said to share regional traits, Norberg-Schulz identifies differences (the cultivated and closely detailed landscape and architecture of Denmark, the dramatic, structured forms of Norway) that allow him to account for the way individual Nordic architectures evolved.

This is a book on human dwelling. The word 'dwelling' here means something more than having a roof over our head and a certain number of square feet. It means to meet outther for exchange of products, ideas and feelings ; it means to come to an agreement with others ; it means to be oneself, having a small chosen world of our own.

Principles of Modern Architecture is a clear, concise, accessible account of what the modern movement really wanted and what it achieved by one of the world's leading architectural critics.

Christian Norberg-Schulz ' s Interpretation of Heidegger ' s Philosophy investigates the theoretical contribution of the world-renowned Norwegian architectural theorist Christian Norberg-Schulz (1926 – 2000) and considers his architectural interpretation of the writings of German philosopher Martin Heidegger. Though

widely recognised as providing the most comprehensive reading of Heideggerian philosophy through the lens of architecture, this book argues that Norberg-Schulz neglected one of the key aspects of the philosopher ' s contributions: the temporal nature of being-in-the-world as care. The undeveloped architectural implications of the ontological concept of care in his work prevented the fruition of his ultimate aim, transforming the ' art of place ' into an ' art of living ' . This book seeks to realign Norberg-Schulz ' s understanding of time as continuity and change to present a holistic approach grounded in Heidegger ' s phenomenological philosophy; architecture as art of care. Aimed at academics and scholars in architectural theory, history and philosophy, Christian Norberg-Schulz ' s Interpretation of Heidegger ' s Philosophy surveys the implications and significance of the theorist ' s works on architectural criticism in the late 20th century.

Discusses the Beaux-Arts style in architecture, and shows and describes examples among the hotels, banks, apartment buildings, museums, offices, and monuments of Manhattan
