Leah Trachtman-Palchan was an ordinary woman who lived an extraordinary life. This was a life of migration, dissent, exile and survival. Born in the final years of Tsarist Russia, her family was forced to leave their small town following the repeated pogroms of the Civil War era. A two year voyage followed, bringing them all to British Mandate Palestine in 1921. Here what seems like a typical Jewish story of migration from Eastern Europe in the early twentieth century took an unexpected turn. As a teenager, Leah joined the Communist movement in Palestine - illegal under the British Mandate. She was arrested, imprisoned and eventually deported by the British to the Soviet Union. This memoir is filled with colourful, and sometimes harrowing, sketches of the people who passed through her life during the era of Stalin's Great Purges and the evacuation of factories to Siberia during World War II. Shedding new light on both Mandate Palestine and the Jewish experience in Soviet Moscow, this book reveals the remarkable story of a woman living through some of the most pivotal events of twentieth-century history.

In color throughout, Illustrated Manual of Injectable Fillers clearly evaluates the uses, limitations, and compositions of the growing variety of available fillers involved in face and body rejuvenation. It includes detailed techniques for the facial analysis and diagnosis of aging conditions. This resource helps you provide your patients with safe, reliable, and aesthetically pleasing results, including preventing and properly treating potential complications of filler usage. Clearly organized by anatomy, the book discusses the specific analysis, diagnosis, and treatment for the upper face, midface, lower face and neck, hands, and the torso (after liposuction). It is an excellent introduction for novices performing volume restoration procedures and an invaluable guide to novel techniques and advanced procedures for experienced physicians.

Most introductory books about computers are long, detailed technical books such as those used in a computer science course or else tutorials that provide instructions on how to operate a computer with little description of what happens inside the machine. This book fits in the large gap between these two extremes. It is for people who would like to understand how computers work, without having to learn a lot of

technical details. Only the most important things about computers are covered. There is no math except some simple arithmetic. The only prerequisite is knowing how to use a web browser. As an alternative or adjunct to reading the book, you can watch a series of short videos by going to youtube.com and searching for "Understanding Computers, Smartphones and the Internet". Only current day technology is covered. People who are interested in learning about how computers evolved from the earliest machines can read the companion book "A Concise History of Computers, Smartphones and the Internet". While originally intended for people who are not in the computer field, this book is also useful for those taking a coding course or an introductory computer science course. Even people already in the computer field will find things of interest in this book.

This book is a comprehensive guide to contrast-enhanced mammography (CEM), a novel advanced mammography technique using dual-energy mammography in combination with intravenous contrast administration in order to increase the diagnostic performance of digital mammography. Readers will find helpful information on the principles of CEM and indications for the technique. Detailed attention is devoted to image interpretation, with presentation of case examples and highlighting of pitfalls and artifacts. Other topics to be addressed include the establishment of a CEM program, the comparative merits of CEM and MRI, and the roles of CEM in screening populations and monitoring of response to neoadjuvant chemotherapy. CEM became commercially available in 2011 and is increasingly being used in clinical practice owing to its superiority over full-field digital mammography. This book will be an ideal source of knowledge and guidance for all who wish to start using the technique or to learn more about it.

This book presents the papers from the latest conference in this successful series on fuel injection systems for internal combustion engines. It is vital for the automotive industry to continue to meet the demands of the modern environmental agenda. In order to excel, manufacturers must research and develop fuel systems that guarantee the best engine performance, ensuring minimal emissions and maximum profit. The papers from this unique conference focus on the latest technology for state-of-the-art system design, characterisation, measurement, and modelling, addressing all technological aspects of diesel and gasoline fuel injection systems. Topics range from fundamental fuel spray theory, component design, to effects on engine performance, fuel economy and emissions. Presents the papers from the IMechE conference on fuel injection systems for internal combustion engines Papers focus on the latest technology for state-of-the-art system design, characterisation, measurement and modelling; addressing all technological aspects of diesel and gasoline fuel injection systems Topics range from fundamental fuel spray theory and component design to effects on engine performance, fuel economy and emissions

Cardiovascular diseases are still the leading cause of death in developed countries. Revascularization procedures such as coronary artery and peripheral bypass grafts, as well as access surgery represent a 2\$ billion market yearly for the US alone. Despite intense research over many decades, no clinically suitable, shelf-ready, synthetic, vascular, small-caliber graft exists. There is therefore still a quest for such a clinical vascular prosthesis for surgical revascularization procedures and access surgery. Many approaches have been tried and are currently under investigation with promising results. These range from acellular and cell-based, stable or bio-degradable, synthetic scaffolds to biological or decellularized grafts, not forgetting self-assembly technologies for in vitro or in vivo VTE. All these approaches can be further enhanced by functionalization, e.g. with growth factors and drug elution. This updatable book aims to cover all the relevant aspects of Vascular Tissue Engineering (VTE) and novel alternatives to develop vascular grafts for clinical applications. The chapters in this book cover different aspects of manufacturing scaffolds with various polymers, mechanical characteristics, degradation rates, decellularization techniques, cell sheet assembly, 3-D printing and autologous mandril-based VTE. All the necessary in vitro tests such as biocompatibility and thrombogenicity are reviewed. Pre-clinical assessment of in vivo experimental models include patency, compliance, intimal hyperplasia, inflammatory reaction, cellular ingrowth and remodeling. Finally, early clinical trials will be periodically updated regarding results, regulatory aspects and post-marketing quality assessment. Furthermore, the reader should get an insight into various approaches, technologies and methods to better understand the complexity of blood surface and cell interactions in VTE. Translational research has yielded early human applications clearly showing the enormous need of research in the field to provide better solutions for our patients and this continuously updated book will hopefully become a reference in the field for life sciences.

The Instructor's Manual contains worked out solutions to 230 of the 256 problems in Ogunnaike and Ray, Process Dynamics, Modeling, and Control (published November 1994). It is to be distributed gratis to adopters of the text and to qualified professors who are seriously considering adopting the text and have requested it.

Cardiovascular diseases are the leading cause of death in Western countries. In non-fatal cases, they are associated with a decreased quality of life as well as a substantial economic burden to society. Most sudden cardiac events are related to the complications of a non-stenosing marginal plaque. For this reason, the ability to properly identify the atherosclerotic plaque with a rapid, non-invasive technique is of utmost clinical interest in therapeutic planning. Coronary CT angiography produces high-quality images of the coronary arteries, in addition to defining their location and the extent of the atherosclerotic involvement. Proper knowledge of the equipment, adequate preparation of the patient, and accurate evaluation of the images are essential to obtaining a consistent clinical diagnosis in every case. With its clear and concise presentation of CT imaging of the coronary arteries, this volume provides general practitioners and cardiologists with a basic understanding of the technique. For radiologists with no direct experience in cardiac imaging, the book serves as an important source of information on coronary pathophysiology and anatomy.

Presenting the information a technologist needs to know to perform advanced diagnostic and interventional special procedures, this text provides complete coverage of topics such as angiography, cardiac catheterization, and vascular interventions. A general overview includes room design, image recording systems, injection devices, contrast media, and catheters. Coverage of specific imaging procedures includes anatomy, indications and contraindications, procedures, contrast media, patient care, equipment, and patient positioning. Discussions of cardiac and vascular interventional procedures help practicing radiographers prepare for the ARRT advanced certification exams. Special tables for equipment tray setup list the items needed for each procedure. Chapter summaries recap the most important information and provide a quick review. Key terms are bolded throughout chapters. Special boxes draw attention to important information in the chapter. List of pharmaceutical resources is included in new appendix. End-of-chapter questions include 10 multiple-choice questions for self-assessment. Chapter objectives focus on the most important information to be learned. Updated art program includes new line
