Zeus pods create horizontal thrust. The full power of the engines is used to drive the boat forward, unlike standard inboard shafts that push the boat upward. The hydrodynamic shape of the Zeus pod creates much less drag than a shaft, strut, and rudder. By placing the propellers in the rear, we experience less form drag.

One other Zeus standard missing on IPS is trim tabs integrated into the pod housings. In my opinion, it's a worthwhile feature, though Volvo's transom-mounted QL trim tabs are effective and produce little hydrodynamic drag. Zeus and IPS both offer a trolling or slow-speed mode.
