The award-winning team of Abraham Silberschatz, Peter Galvin, and Greg Gagne gets system administrators right up to speed on all the key concepts of computer operating systems. This new edition gives them a thorough theoretical foundation that they can apply to a wide variety of systems as they progress to the next level of their computer work. It presents several new Java example programs including features in Java 7. Increased coverage is offered on user perspective, OS design, security, and distributed programming. New exercises are also provided to reinforce the concepts and enable system administrators to design with confidence.

This textbook provides coverage of the fundamental concepts which make up the foundation of operating systems and also gives practical experience with a fully functioning instructional operating system called NACHOS. This edition also features new chapters on the history of the operating systems and on computer ethics, as well as a further case study on WindowsNT. Memory management, including modern computer architectures and file system design and implementation are also covered. Common operating systems (MS-DOS, OS/2, Sun OS5 and Macintosh) are used throughout to illustrate concepts and provide examples of performance characteristics.

Keep pace with the fast-developing world of operating systems Open-source operating systems, virtual machines, and clustered computing are among the leading fields of operating systems and networking that are rapidly changing.
