Abstract We have devised in this work a general synthetic strategy for preparation of single- and multicomponent rare-earth coordination polymer colloidal spheres (RE-CPCSs). This strategy is based on an integration of coordination chemistry and antisolvent effect for synchronized

Coordination Chemistry
From the chemical point
of view, Ln III ions
behave like hard Lewis
acids and their bonding is
essentially electrostatic,
with small covalent
contributions. Generally
speaking, therefore, they
prefer to form complexes
with oxygen donors than

Access Free
