A database refactoring is a small change to your database schema which improves its design without changing its semantics (e.g. you don't add anything nor do you break anything).

### Refactoring Databases:

Evolutionary Database Design

An important aspect of this book is that the catalog of refactorings is presented in the context of evolutionary database development described in the first five chapters: this approach emphasises an iterative approach, automated

### Evolutionary Database

Refactoring Databases:

Evolutionary Database Design

A database refactoring is a small change to your database schema (the table structures, data itself, stored procedures, and triggers) which improves its design without changing its semantics. Database refactoring is a technique which supports evolutionary development processes. Collaboration between the data team and developers

### Column Evolutionary Database

Database refactoring is the technique of implementing small changes to the database schema without affecting the functionality and information stored in the database. The main purpose of database refactoring is to improve the database design so that the database is more in-sync with the changing requirements.
