The combined three volumes of these texts cover traditional linear circuit analysis topics - both concepts and computation - including the use of available software for problem solution where necessary. The text balances emphasis on concepts and calculation so students learn the basic principles and properties that govern circuits behaviour, while they gain a firm understanding of how to solve computational techniques they will face in the world of professional engineers.

Designed for use in a one or two-semester Introductory Circuit Analysis or Circuit Theory Courses taught in Electrical or Computer Engineering Departments. The most widely used introductory circuits textbook. Emphasis is on student and instructor assessment and the teaching philosophies remain: - To build an understanding of concepts and ideas explicitly in terms of previous learning - To emphasize the relationship between conceptual understanding and problem solving approaches - To provide students

with a strong foundation of engineering practices.

Modern technology has enhanced many aspects of life, including classroom education. By offering virtual learning experiences, educational systems can become more efficient and effective at teaching the student population. The Handbook of Research on Collaborative Teaching Practice in Virtual Learning Environments highlights program developments in the realm of digital worlds in educational settings. Featuring pedagogical methods and topics relating to cooperative learning, hands-on curriculum, and meta-cognitive dimensions, this publication is a critical reference source for pre-service and in-service teachers, school administrators, higher education faculty, and researchers interested in virtual reality incorporation in the classroom.

The fourth edition of this work continues to provide a thorough perspective of the subject, communicated through a clear explanation of the concepts and techniques of electric circuits. This edition was developed with keen attention to the learning needs of students. It includes illustrations that have been redesigned for clarity, new problems and new worked examples. Margin notes in the text point out the option of integrating PSpice with the provided Introduction to PSpice; and an instructor's roadmap (for instructors only) serves to classify homework problems by approach. The author has also given greater attention to the importance of circuit memory in electrical engineering, and to the role of electronics in the electrical engineering curriculum.

The 2008 Physics Education Research Conference brought together researchers studying a wide variety of topics in physics education. The conference theme was "Physics Education Research with Diverse Student Populations". Researchers specializing in diversity issues were invited to help establish a dialog and spur discussion about how the results from this work can inform the physics education research community. The organizers encouraged physics education researchers who are using research-based instructional materials with non-traditional students at either the pre-college level or the college level to share their experiences as instructors and researchers in these classes.

EDUCATIONAL FOUNDATIONS, Second Edition, explains today's schools for those who are trying to picture themselves within the education profession. The book makes educational foundations topics relevant and

This book is the sixth in a series of publications on the subject of integrated science teaching and is based on the proceedings of a consultation meeting held on the theme "Recent Developments in Integrated Science Teaching Worldwide". The meeting was organized by the Australian National Commission for Unesco, in cooperation with the International Council of Associations in Science Education (ICASE) and with the Australian Science Teachers' Association. The intention of the book is to reflect how far integrated science teaching had spread around the world. The chapters in the first part of this book describe key issues in integrated science and broad trends in the approaches to integrated science teaching worldwide. They include the conclusions of five working groups set up during the meeting to discuss the key issues in the following areas: (1) content (developments in science and technology and their implications for science education); (2) curriculum and resource materials; (3) teaching, learning, and assessment; (4) equipment and science teaching facilities; and (5) teacher education. The following articles are included in eight chapters of Part I: "What Is Integrated Science Teaching: Its Beginnings and Its Place Today" (Dennis G. Chisman); "Reflections on the Development of Integrated Science Teaching Projects for 4-16 Year Olds" (Kerst Th. Boersma, and others); "The Integration of Science Teaching through Science-Technology-Society Courses" (John Holman); and "Teacher Behaviours Which Facilitate Integrated Science Teaching" (Ronald J. Bonnstetter). The second part of the book describes national and regional developments in the teaching of integrated science in Africa, the Arab States, Asia and the South Pacific, Europe and North America, Latin America and the Caribbean; and is based largely on the reports and discussions at the meeting. The third part contains some examples of topics and modules of integrated science courses taken from recent courses in Botswana, the Caribbean, the Netherlands, the Philippines, Sierra Leone, and the United Kingdom. The fourth part is an annotated bibliography (over 370 entries) which attempts to sample literature relevant to integrated science. (KR)
