causes the penis to begin to become erect. The developing erection also constricts the exiting veins of the penis.

The Male Reproductive System - CliffsNotes Study Guides

The reproductive system is the human organ system responsible for the production and fertilization of gametes and, in females, the carrying of a fetus. Both male and female reproductive systems have organs called gonads (testes in males, ovaries in females) that produce gametes (sperm or eggs) and sex hormones (such as testosterone in males and estrogen in females).

Reproductive System Study Guide Answers

The female reproductive system develops before birth but doesn't reach maturity until puberty. From puberty until around midlife, females will have a monthly menstrual cycle that will allow the female to have a child when an egg cell is fertilized by a sperm cell. When a woman reaches midlife, she undergoes.
