Or as Adler put it, "the material of life has been constantly bent on reaching a plus from a minus situation" (Alfred Adler, Social Interest: A Challenge to Mankind). While the striving for superiority is innate, the specific manifestations of this striving are determined by the content of our self-ideal.

Brings together the Austrian psychologist's papers on psychotherapy, neurosis, delinquency, religion, and the impact of social repression on personality

Albert Ellis was one of the most influential psychotherapists of all time, revolutionizing the field through his writings, teachings, research, and supervision for more than half a century. He was a pioneer whose ideas, known as Rational Emotive Behavior Therapy (REBT), formed the basis of what has now become known as Cognitive Behavior Therapy (CBT), the most widely accepted psychotherapeutic approach in the world. This book contains some of Ellis's most influential writings on a variety of subjects, including human sexuality, personality disorders, and religion, with introductions by some of today's contemporary experts in the psychotherapy field. The 20 articles included capture Ellis's wit, humor, and breadth of knowledge and will be a valuable resource for any mental health professional for understanding the key ingredients needed to help others solve problems and live life fully.

When we hear such expressions as feelings of inferiority and insecurity, striving for self-enhancement and power, woman's revolt against her feminine role, the oversolicitous mother, the dethronement of the first-born, the need for affection; when maladjustment is spoken of as self-centeredness, psychological health as other-centeredness; psychiatry as the science of interpersonal relations, neurotic symptoms as ego-defenses and forms of aggression, to mention only a few instances—we are meeting ideas in which Alfred Adler was the pioneer from 1907, the date of his first important publication, until his death in 1937. The purpose of the present volume is to make Adler's contributions to the theory and practice of psychology available in a systematic and at the same time authentic form. To this end we made selections from his writings and organized them with the aim of approximating the general presentation of a college textbook. Because every word in the main body of the work is Adler's, the outcome of our efforts, if we have been successful, should be the equivalent of a textbook by Adler on Individual Psychology, the name which he gave to his system.
