Sittig's Handbook of Toxic and Hazardous Chemicals and ...

Chemical toxicity refers to the capacity of a substance to cause damage or harm to the body. A chemicals level of toxicity is dependent on the extent it is absorbed by the body, chemical structure of the product, and the body's ability to detoxify the matter. The hazard of a chemical is defined as the likelihood the substance will cause harm.

Toxic and Hazardous Chemical Exposure Attorneys - Lake ...

'Toxic' is a specific property relating to a substance that makes it poisonous. On the other hand, a hazardous substance contains some properties such as being toxic, flammable, reactive or otherwise dangerous and risky to use in some way. Finally, 'toxic' also has a figurative usage that 'hazardous' does not.

Difference Between Toxic and Hazardous | Difference Between

One of the most devastating effects of industrial waste is water pollution. For most industrial processes, heavy amount of water is used which comes in contact with harmful chemicals. These chemicals are usually metals or radioactive material. This heavily effects the environment because most of waste ends up in oceans, lakes, or rivers.
